

Data Sheet

E300

The Cradlepoint NetCloud Enterprise Branch Service with E300 Series Router is ideally suited for pop-up temporary locations, branches, stores, and restaurants. The all-in-one form factor includes full-featured routing, security, and Wi-Fi, making it easy to connect branches to the Internet and critical applications without the need for extra hardware or complicated configurations. And the embedded LTE modem means that connectivity is always available from day 1 without waiting for a wired connection.

Notable Features

- Take advantage of an embedded, Gigabit-Class LTE modem for fast day-1 or primary connectivity.
- Terminate a primary wired broadband link with LTE as failover for highly resilient hybrid connectivity.
- Open temporary locations without compromising security or reliability with an all-in-one design and compact form factor.
- Integrate into your existing network with standards-based dynamic routing and VPN tunnel support.
- Define policies through centralized, cloud-based management for easy deployment at scale.
- Add a second cellular modem for dual LTE connectivity.
- 5G Ready acting as Captive Modem controller for Cradlepoint 5G Wideband Adapters.

Ideal for Wireless WAN

For organizations moving to a Wireless WAN, the E300 offers the ability to pair LTE with a wired link and use LTE as a failover connection or a primary connection. For an all wireless WAN, the E300 offers Gigabit-Class LTE performance, which can support the throughput needs of a small- or medium-sized branch with the ability to add a second LTE connection to increase available bandwidth and reliability.

5G Ready for Upward Compatibility

The E300 Enterprise Branch Router is 5G Ready and can act as a controller for a Cradlepoint 5G Wideband Adapter. This capability ensures upward compatibility for 5G, while still allowing optimal placement of the 5G adapter. The unique capability of Cradlepoint to operate the adapter in captive mode means that the two separate, Ethernet-connected, appliances can be managed as a single entity.

Performance

Stateful Firewall Throughput	IPS Throughput	Application Aware Services & Analytics	IPSec VPN Throughput	Concurrent VPN Tunnels	Concurrent Sessions (TCP)	Typical Client Count
940 Mbps	940 Mbps	940 Mbps	400 Mbps	20	130,000	50

Performance testing conducted based on requirements as defined in RFC2544 using fixed-frame 1518 byte packets. Throughput results reflect uni-directional UDP traffic with less than 1% packet loss as tested with wired connections.

Results do not reflect performance of the cellular wireless operator networks.

Key Software Capabilities

Cradlepoint NetCloud Service for the E300 provides everything needed to unlock the power of LTE at the network edge and connect users and IoT devices to critical applications and services. The NetCloud Service package for the E300 includes router software for optimizing routing, VPN, SD-WAN, and security capabilities. The cloud capabilities include group policy definition, reports, troubleshooting, and analytics dashboards. The service includes a warranty for as long as there is an active subscription on the router, online training, live and online support, and all software and firmware updates.

Router Services

Next generation hardware provides local processing power to handle demanding router-delivered services, such as support for VPN tunneling encryption that includes DMVPN, IPsec, GRE, and other tunneling technologies.

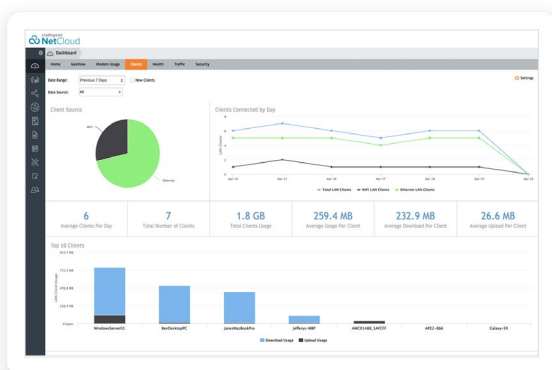

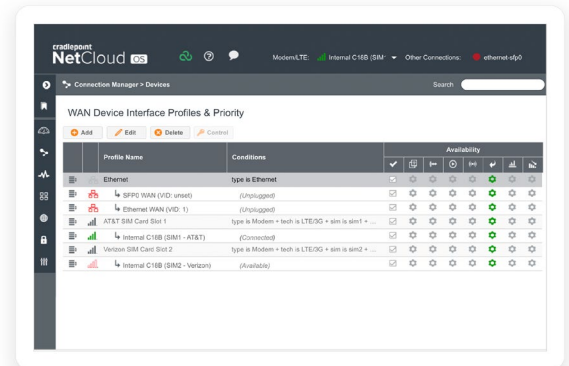

Security Services

NetCloud Service includes security features and options to optimize the E300 to meet the evolving security needs of distributed environments. The service includes stateful zone-based firewall enhancement capability to Application Aware Traffic Steering with the Advanced package.

Connection Manager

Connection Manager provides the ability to manage all WAN connections types, both wireless and wired, from a single software-defined policy. Our custom-built modem software ensures users establish Wireless WAN connectivity faster while maintaining the highest level of resiliency.

Cloud Services

NetCloud Manager delivers true zero-touch deployment with the ability to define and deliver policy across entire groups of endpoints. Users can create a cloud-orchestrated hub and spoke VPN network and gain insights and analytics required for rapid troubleshooting and diagnostic workflows.

* Cellular carriers and operators throughout the world may only require telecom industry certifications, like PTCRB or GCF, to operate on their network. Some carriers require additional testing and approval, beyond telecom certifications. A carrier listed in the approvals section means Cradlepoint completed additional testing and acquired technical approval for that given carrier. Any carrier not listed may not require additional testing or approval beyond telecom industry certifications to operate on their network.

Ordering Guide

NetCloud Enterprise Branch Essentials packages and plans contain all the features and capabilities required for small to mid-sized branch applications. Essentials Packages include 24x7 support (phone support: 24 hour weekdays with emergency response on weekends, web: 24x7, chat: 24x5) and a limited lifetime warranty.

For additional capabilities, a **NetCloud Enterprise Branch Advanced Plan** can be added to the NetCloud Enterprise Branch Essentials Package at any time.

See additional details of what is included in the Essential and Advanced NetCloud software: cradlepoint.com/netcloud-manager

Support & Warranty

The E300 is only sold as a component of NetCloud Branch Packages.

- NetCloud Packages include support for the full subscription term.
- All Cradlepoint hardware products are covered by a limited lifetime warranty for as long as they have a subscription license to an active NetCloud Service Plan.
